2nd August 2025

Human Resource Department

UNDP
Lebanon

Dear Recruitment and Selection Unit,

Engineering has not only shaped my career aspirations—it has transformed the way I think, solve problems, and approach challenges. As a graduate in Computer and Communication Engineering, I am excited to apply for the Digital Transformation Internship: Global Call for 2025, specifically in the Product Design, Build, and Management (including AI tools) track.

Through my studies and projects in PHP, Python, and C#, I gained strong skills in problem-solving and software development. My internship in ASP.NET Core Web API provided hands-on experience, and my research project on improving image quality using AI models and Libraries like Real-ESRGAN strengthened my interest in applying AI to practical solutions.

My previous involvement with UNDP has been very meaningful. As a Youth Leadership Programme (9th Cohort) member, I enhanced my teamwork and project management skills. In addition, my volunteer work at the Ministry of Finance (with UNDP) involved working on a new digital system by assisting with data entry tasks.

These opportunities inspired me to further engage with UNDP, whose commitment to diversity, equity, and inclusion and mission to advance sustainable development align strongly with my own values. I am eager to contribute my technical expertise and passion for innovation to support the organization's digital transformation goals.

I've attached my CV for your consideration, and I'd welcome the opportunity to discuss how I can support your team's goals.

Thank you for your time and consideration. I look forward to hearing from you.

Sincerely,

Lara Srour
